

Aarke Coffee Press

A heat-retaining coffee press crafted from stainless steel

HOW TO USE THE AARKE COFFEE PRESS:

- ① Preheat the press by rinsing it with hot water, then discard the water.
- ② Boil water in your kettle at an ideal temperature: 92°C–96°C / 198°F–205°F.
- ③ Pour your ground coffee into the empty carafe: 1 spoon (7,5 g) per 125 ml / 4 oz water.
- ④ Pour a small amount of hot water to saturate the grounds. Wait 30 seconds. Then slowly pour the remaining water in a circular motion. Stir gently.
- ⑤ Place the lid on with the plunger pulled all the way up. Let the coffee steep for 4 minutes before pressing down the plunger slowly and steadily.
- ⑥ Pour and enjoy!

Pro tip!

Use freshly ground beans just before brewing for best flavour. Recommended grind size for Aarke Coffee Grinder: 45–55.

Rinse the filter mesh thoroughly after each use to keep your press in perfect condition.

IN THE BOX:

- Aarke Coffee Press
- Measuring spoon

Press for perfection

A stainless steel coffee press with double-wall construction for optimal heat retention. Designed with a fine stainless-steel mesh filter and a non-drip spout. The heat-safe handle ensures a secure grip. Dishwasher-safe and easy to maintain.

Compact yet uncompromising

Serving as a compact option for smaller spaces and the summer house, it delivers both function and aesthetics without compromise.

Part of the Aarke Coffee Collection

The coffee press is designed to complement the rest of the Aarke Coffee Collection. With a shared focus on premium materials, precision engineering, and timeless design, it pairs seamlessly with our Kettle and Coffee Grinder.

Full of Flavour

Press coffee brewing preserves more of the coffee's natural oils and aromatic compounds than filter methods, resulting in a fuller, rounder flavor profile.
